Roll-2-Roll Technologies Wins 2016 AIMCAL Technical Excellence Award

Press Release

Roll-2-Roll Technologies Finalist – Coating ,Laminating, Metallizing Equipment Accessories The patented ARIS intelligent web-guiding system from Roll-2-Roll Technologies LLC (Stillwater, OK), combines fiber optic sensing technology with advanced signal processing and adaptive control technology. As a result, the system automatically detects the edge of the web without calibration or teaching and adapts to changes in web speed, tension, material properties and sensor gain. Capable of handling a wide range of materials and automatically adapting to new substrates or processes, the technology also enhances the flexibility of converting operations.
