

The Most Intelligent WEB GUIDES Should Be EASY TO USE

Roll-2-Roll Technologies' Unwind/Rewind Guides are the simplest web guiding systems available in the market. The same plug and play technology featured in our intermediate web guides for narrow and wide web applications and web guiding retrofit kits, is available in our unwind/rewind guide kits. Whether you are replacing an existing technology or installing a new guide in your unwind/rewind build, this kit fits your needs.

Unwind guides and rewind guides feature an electromechanical actuator, controller and sensor for automatic guiding on shifting roll stands. The Unwind/Rewind actuators can move loads up 15,000 lbs with a maximum thrust of 1500 lbf.

GENERAL SPECIFICATIONS

Thrust	50 lbf (222 N) to 1,500 lbf (6670 N)	Current (rms)	2 A to 5.5 A
Stroke Length	1 in (25 mm) to 12 in (300 mm)	Voltage	24 VDC or 48 VDC
Speed	Upto 2 in/sec (51 mm/sec)	Power	6.5 W to 210 W

BENEFITS

- **Increase productivity** with no setup and calibration after product changeover
- **Save time** with plug-and-play operation
- **Reduce waste** with high accuracy and high precision guiding
- **Save money** with a single solution for multiple guiding applications
